

Short start-up phase – higher operating income

BC-PRO **START**

The key to a safe and quick start-up of biogas plants

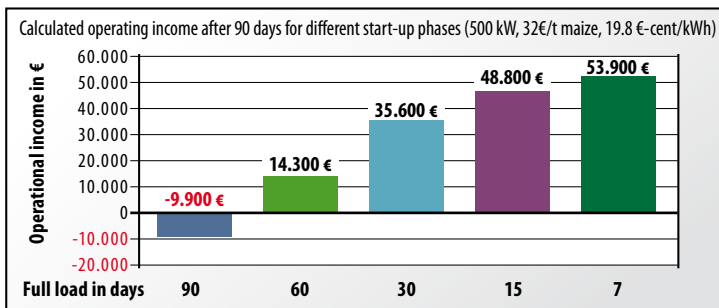

- activates the process biology
- decreases the corrosivity of the gas mixture
- accelerates the development of the biocenosis
- reduces the risk of acidification
- shortens the start-up phase

BC.PRO START – The key to a safe and quick start-up of biogas plants

The mixture of micronutrients, iron compounds and buffer substances developed specifically for the start-up phase creates an optimal environment for the process biology and it binds hydrogen sulfide during the formation.

BC.PRO START supports the start-up phase of biogas plants.

For the start-up phase and for specific questions about the biology of your new biogas plant, the know-how network of Schaumann BioEnergy Consult is by your side with guidance and resources.

Biological start-up 

- execution of the necessary analyses
- interpretation of the results
- feeding plan for your biogas plant

A fast start-up of the biogas plant with the consultancy of Schaumann BioEnergy Consult increases the operating income during the first year.
