

Mixing instructions for the SILASIL ENERGY product line

1. Fill the mixing container up to the filling level with clean, cold (10 – 20 °C) water.

2. Add SILASIL ENERGY powder to the mixing container.

3. Shake the solution vigorously for approx. 15 seconds until the contents start to warm up slightly.

4. Transfer the bacterial concentrate mixture into the concentrate tank of the dosage device through a straining funnel.

5. Use the appropriate number of canisters (see dosage instructions) to reach the desired final concentration, top up with water and shake vigorously again.

Follow the dosage indications on the canister of the SILASIL ENERGY product concerned.
Further information is available from your SCHAUMANN BioEnergy special adviser.
